

ZMS — WEBSITE DESIGN SYSTEM

Brand direction extracted from the supplied ZMS Business Management Consultancy logo. This document is the single visual source of truth for the website.

1. Core Visual Direction

Positioning: premium business consultancy • corporate • established • strategic • trustworthy.

Visual character: refined and executive, with a strong navy foundation and restrained metallic-gold accent. Use generous whitespace and clean layouts. The website should feel premium without looking flashy.

Important: Do not introduce any other brand colors, fonts, gradients, decorative styles, or visual themes. The supplied logo should be treated as the source of the visual identity.

2. Approved Color Palette — ONLY THESE COLORS

Role	Name	HEX	Usage
Primary	Deep Navy	#081F2D	Main headings, navigation, primary buttons, footer, strong text
Accent	Executive Gold	#C89A3D	Thin lines, icons, highlights, button details, selected states
Background	Warm Ivory	#FBF6EA	Main page background and light sections
Text	Navy-Charcoal	#172B36	Body copy and secondary text

3. Typography — ONLY THESE FONTS

Headings: **Cormorant Garamond** — elegant high-contrast serif. Use for major headings, hero statements, and selected premium editorial moments. Weights: 500–600.

Body/UI: **Montserrat** — clean geometric sans-serif. Use for navigation, body text, labels, buttons, forms, cards, metrics, and all functional UI. Weights: 400, 500, 600, 700.

Fallbacks: Georgia for Cormorant Garamond and Arial for Montserrat only if the chosen font cannot be loaded. Do not add a third font.

Element	Font	Weight	Desktop size
Hero headline	Cormorant Garamond	600	56–72 px
Section heading	Cormorant Garamond	600	38–48 px
Subheading	Montserrat	500–600	18–24 px
Body	Montserrat	400	16–18 px
Navigation	Montserrat	500–600	14–15 px
Button	Montserrat	600	14–15 px

Element	Font	Weight	Desktop size
Small label	Montserrat	600	11–13 px

4. UI Styling Rules

- **Buttons:** Deep Navy background with Warm Ivory text. Gold may be used as a thin border or small hover/detail accent. Avoid pill-shaped buttons; use a refined 4–6 px radius.
- **Cards:** Warm Ivory or white only when necessary for contrast; 8–12 px radius; very subtle border using the approved palette. Avoid heavy shadows.
- **Dividers:** Thin Executive Gold lines for premium section separation; otherwise use subtle Deep Navy/ivory contrast.
- **Navigation:** Minimal, spacious, Deep Navy text. Active/hover state uses Executive Gold.
- **Forms:** Clean rectangular fields, 6 px radius, clear labels, strong focus state using Executive Gold.
- **Icons:** Simple line icons only. Use Deep Navy or Executive Gold. No colorful icon sets.
- **Images:** Use professional corporate/architecture/business imagery with natural, sophisticated lighting. Do not use the logo's cityscape image as a repeated background.

5. Layout & Spacing

- **Overall:** clean executive editorial layout with generous whitespace.
- **Container:** maximum width around 1200–1280 px on desktop.
- **Grid:** 12-column desktop grid; collapse naturally to 1–2 columns on mobile.
- **Spacing:** use a consistent 8 px base scale: 8, 16, 24, 32, 48, 64, 80, 96 px.
- **Section spacing:** approximately 80–120 px desktop and 56–72 px mobile.
- **Border radius:** 4–6 px for buttons/inputs; 8–12 px for cards. Never use excessive rounded/pill UI.
- **Whitespace:** prefer breathing room over filling every area with cards or decorative elements.

6. Visual Language

- **Use:** premium corporate, architectural, strategic, trustworthy, polished, understated.
- **Do not use:** purple/blue AI-style gradients, neon colors, excessive gradients, glassmorphism, cartoon illustrations, oversized blobs, random abstract shapes, excessive animations, or generic AI-dashboard aesthetics.
- **Gold rule:** gold is an accent, not the dominant page color. Keep it restrained.
- **Navy rule:** navy establishes authority and contrast. Use it for major brand moments.
- **Ivory rule:** ivory keeps the experience warm and premium rather than sterile white.

7. Component Consistency

Every page must reuse the same typography, colors, buttons, cards, form fields, navigation, spacing, radii, icon treatment, and interaction states. Do not redesign components separately for individual sections.

8. Prompt-Ready Instruction for Claude

STRICT DESIGN SYSTEM – ZMS WEBSITE

Use the attached ZMS logo as the brand reference and follow the supplied ZMS Website Design System exactly.

ONLY use these brand colors:

Deep Navy #081F2D

Executive Gold #C89A3D

Warm Ivory #FBF6EA

Navy-Charcoal #172B36

ONLY use these fonts:

Cormorant Garamond for headings

Montserrat for body/UI

Do not introduce additional brand colors, fonts, gradients, neon colors, purple/blue AI-style palettes, glassmorphism, excessive shadows, pill-shaped UI, or unrelated decorative styles.

The visual direction must be premium, executive, corporate, strategic, elegant and understated. Use generous whitespace, strong information hierarchy, restrained gold accents, clean navigation, refined cards, and consistent 8px spacing.

Treat this design system as a hard constraint. If a design decision is not specified, choose the simplest option that remains consistent with this system rather than inventing a new visual style.

END OF DESIGN SYSTEM — This file is intended to be supplied alongside the website-generation prompt.
